Sequence 5, Application US/09213392

Sequence 5, Application US/09213392

Patent No. 5945505

GENERAL INFORMATION:

APPLICANT: Bandman, Olga

APPLICANT: Goli, Surya K.

TITLE OF INVENTION: NOVEL HUMAN PHOSPHOLEMMAN-LIKE PROTEIN

NUMBER OF SEQUENCES: 6

CORRESPONDENCE ADDRESS:

ADDRESSES: Incyte Pharmaceuticals, Inc.

STREET: 3174 Porter Drive
                                                     17; Indels

Na+/K+-exchanging ATPase (BC 3.6.3.9) gamma chain - sheep (fragment)
N;Alternate names: sodium pump gamma chain; sodium/potassium-dependent ATPase gamma chain;
C;Species: Ovis orientalis aries, Ovis ammon aries (domestic sheep)
C;Date: 22-Nov-1993 #sequence revision 05-Dec-1998 #text_change 09-Jul-2004
C;Accession: A46435; S31524; A27383
R;Mercer, R.W.; Biemedderfer, D.; Bliss Jr., D.P.; Collins, J.H.; Forbush III, B.
J. Cell Biol. 121, 579-586, 1993
A;Fitle: Molecular cloning and immunological characterization of the gamma polypeptide, A;Reference number: A46435; MUID:93252993; PMID:8387529
J. Cell Biol. 121, 579-586, 1993
A, Title: Molecular cloning and immunological characterization of the gamma polypeptide, A, Reference number: A46435; MUID:93252993; PMID:8387529
A, Accession: D46435
A, Status: preliminary
A, Molecule type: mRNA
A, Residues: 1-58 < MER.
A, Cross-references: UNIPROT: Q04645; UNIPARC: UPIO0001262A7; EMBL: X70059; NID:9396; PIDN: C
C, Keywords: hydrolase; transmembrane protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Molecule type: mRNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "Mat-8, a novel phospholemman-like protein expressed in human breast tumors, induces a chloride conductance in Xenopus oocytes.", J. Biol. Chem. 270:2176-2182(1995).

-!- FUNCTION: Induces a hyperpolarization-activated chloride current when expressed in Xenopus oocytes. May be a modulator capable of activating endogenous oocytes channels.

-!- SUBCELLULAR LOCATION: Type I membrane protein (Potential).

-!- TISSUE SPECIFICITY: Expressed in a subset of murine breast tumors.

-!- MISCELLANBOUS: Marker of a cell type preferentially transformed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE-95138184; PubMed-7836447; DOI=10.1074/jbc.270.15.8571;

                                                                                           occytes.

- Grand Roccytes.

- Subcritcher Location: Type I membrane protein (Potential).

- Subcritcher Selectively present in the distal parts of the ransparent (medullary and papillary collecting ducts and end portions of cortical collecting tubule) and in the epithelial cells of the distal colon. No expression is found in renal proximal tubule, loop of henle and distal tubule, proximal colon, small intestine, lung, choroid plexus, salivary glands, or brain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Morrison B.W., Leder P.; "neu and ras initiate murine markers that share genetic markers

FXYD domain-containing ion transport regulator 3 precursor (Chloride conductance inducer protein Mat-8) (Mammary tumor 8 kDa protein).

Name=FXYD3; Synonyms=MAT8;
Sus scrofa (Fig).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cell Struct. Punct. 23:315-323(1998).
-!- FUNCTION: Induces a hyperpolarization-activated chloride current when expressed in Xenopus cocytes. May be a modulator capable of activating endogenous oocyte channels.
-!- SUBCELULIAR LOCATION: Type I membrane protein (Potential).
-!- SIMILARITY: Belongs to the FXXD family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3; Gaps

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

-!- FUNCTION: Induces a hyperpolarization-activated chloride current when expressed in Xenopus occytes. May be a modulator capable of activating endogenous occyte channels.

-!- SUBCELLULAR LOCATION: Type I membrane protein (Potential).

-!- TISSUE SPECIFICITY: Expressed in a subset of human breast tumors.

-!- MISCELLANEOUS: Marker of a cell type preferentially transformed by
